

Month-wise Activity Resolution for Grapevine Production

January

We will follow our Grape Decision Support System (DSS) to manage the vineyard from biotic and abiotic stresses.

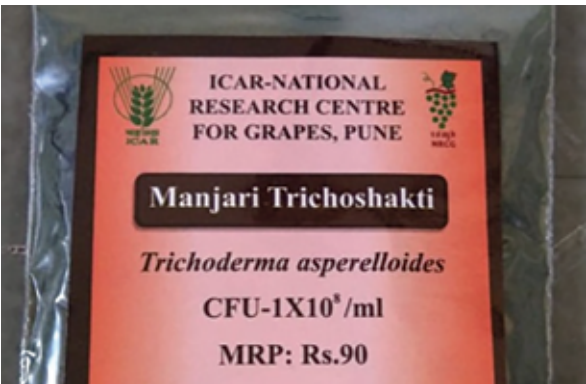

July

We will do timely shoot topping and closely monitor downy mildew and anthracnose during the monsoon.

February

We will enhance fruit quality and improve vineyard health by application of *Manjari Vineguard* and *Manjari Trichoshakti*.

August

We will do judicious management of weeds in vineyard.

March

We will harvest grapes at optimum maturity and promote health through value-added grape products.

September

We will do petiole nutrient analysis for efficient nutrient management.

April

We will prepare vines for the next season by timely pruning and cane development.

October

We will ensure timely fruit pruning and application of PGRs for uniform flowering and fruiting.

May

We will follow the 7 + 5 + 3 rule for sub-cane development and feed the vine with fertigation for proper cane development.

November

We will use the PGRs judiciously based on crop growth stage.

June

We will follow Residue Monitoring Program to produce export compliant grapes.

December

We will popularize our flagship grape varieties.
